# Holistic Portfolio & Project Management

## From Ideas to Project Success with Enterprise Portfolio & Project Mgmt.

### Idea Management \*\*

- Collect & Evaluate Ideas
- Collaborate, Discuss & Vote
- Identify Experts
- Rank Ideas
- Execute on Ideas
- Track Performance from Idea to Product
- Document Idea & Innovation Process

### Portfolio Management

- Draft Project Timeline
- Financial & Capacity Planning
- Risk Assessment
- Technical Feasibility
- Evaluate Commercial Success, Draft KPIs
- Project Total Score & Ranking
- Project What-If / Simulation
- Decision Support
- Strategic Direction

### Project Planning(\*)

- Use Templates
- Structure Project
- Schedule Tasks & Activities
- Planning of Project Efforts & Costs
- Manage Milestones
- Manage Authorization (ACL)
- Archiving
- Import/Export...

### Project Resource Management \*

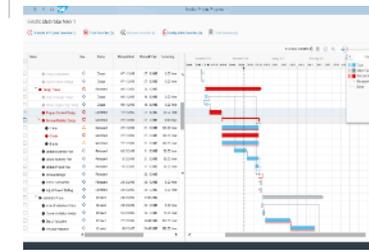

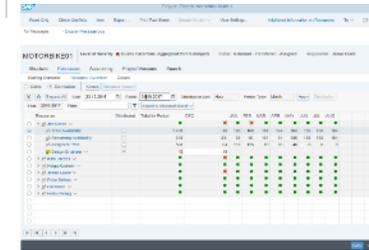

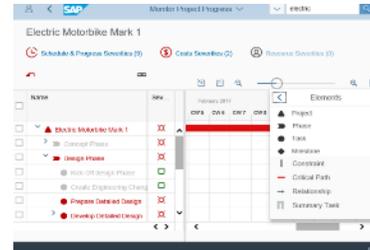

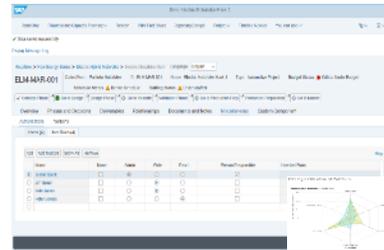

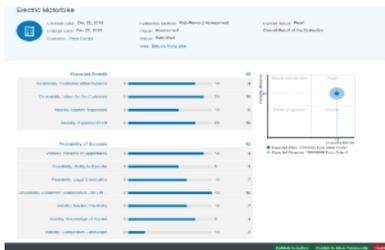

- Plan Resource Demand
- Role Demand in Project
- Identify Available Resources via Candidates, Resource Pools & Teams
- Resource Assignment
- Workflow & Notification
- Resource Overview
- Resource Allocation
- Availability Control

### Project Execution (\*)

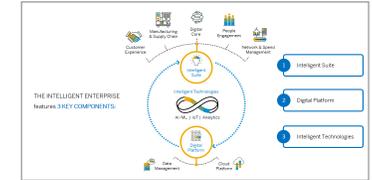

- Phase Approvals
- Project Accounting
- Time Recording
- Multi Project Management
- Project Versions / Snap Shots
- Document Management
- Engineering Change Management

### Monitoring (\*)

- Progress Tracking
- Budget Control
- Availability checks
- Plan vs. Actual
- Embedded Analytics Dashboards

# SAP Industry 4.0 Integrated Operational Platform

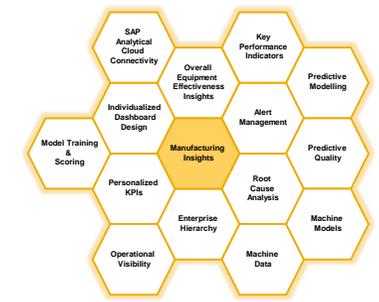

# SAP Digital Manufacturing Cloud

In the digital manufacturing product portfolio

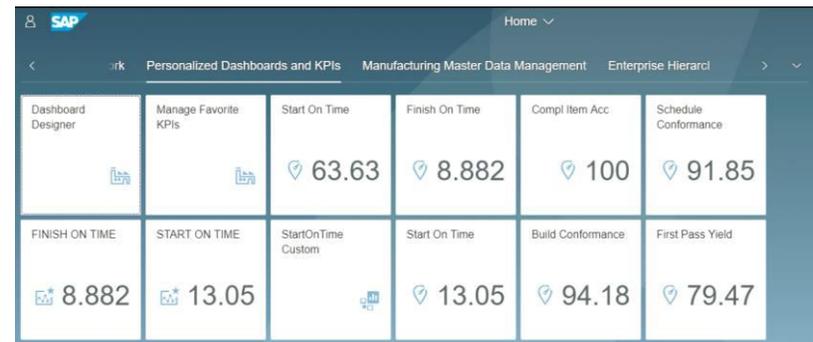

# SAP Digital Manufacturing Cloud for insights

Achieve operational excellence by utilizing dashboards filled with standard/customized KPIs and real time data of sensor data, transactional/operational data from the ERP/MES system for strategic decisions in the board room, tactical decisions at unit or plant level and for daily operations on the shop floor

- ✦ Analyze performance using dashboards filled with pre-defined, standardized key performance indicators (KPI)
- ✦ Retrieve data from your shop floor and production systems and combine it with contextual information from your business sources like SAP ERP, SAP ME, SAP MII
- ✦ Leverage built-in machine learning algorithms in the analysis of quality defects
- ✦ Perform root cause analysis and drill-down at any level; global, plant or individual work center
- ✦ Customize your reporting and generate individual dashboards or create formulas for customized KPI calculations
- ✦ Incorporate data from non-SAP sources using Analytical Model

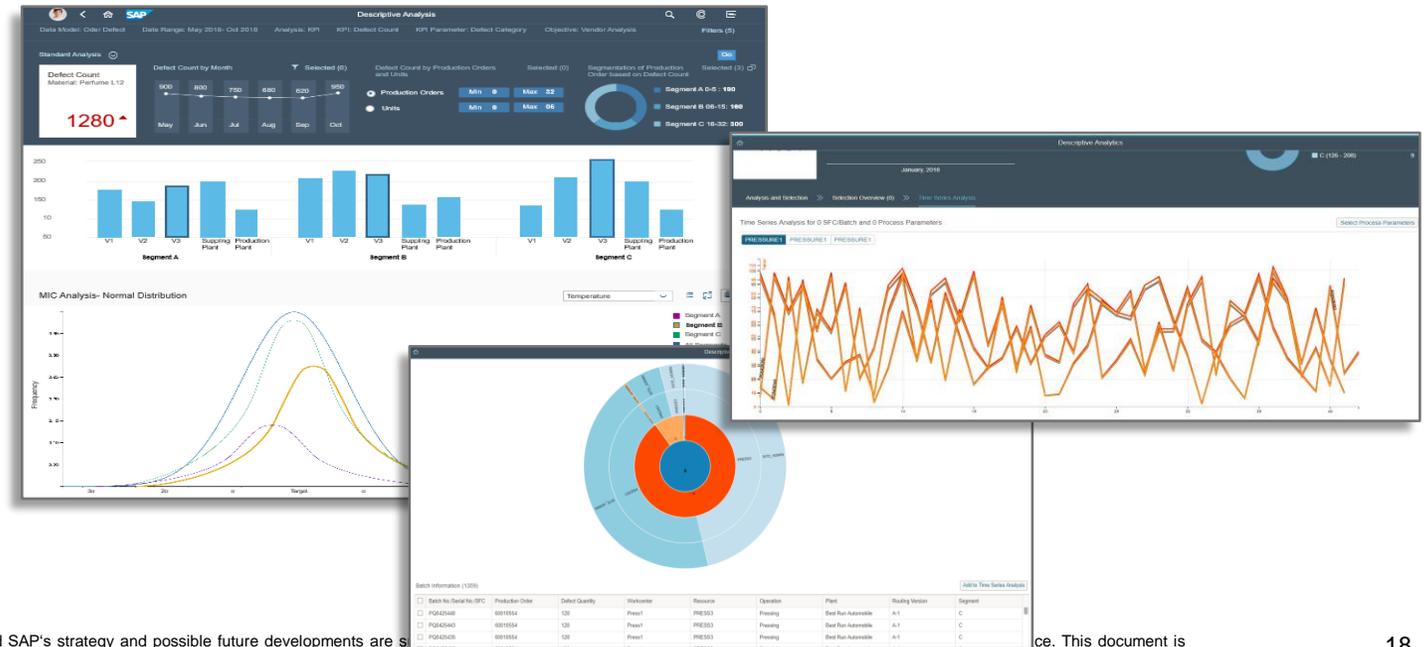

# SAP Digital manufacturing cloud- Predictive Quality

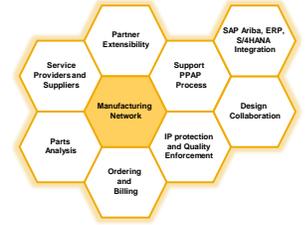

is a solution dedicated to help manufacturers gain valuable insights into the quality aspects of their manufacturing processes, streamline quality management and apply predictive algorithms to reduce losses incurred due to quality issues and recommend corrective actions

## Key Capabilities

- Expose manufacturing big data (IT/OT data) in the pre-defined manufacturing semantics
- Intuitive workbench to Analyze & Correlate multi-tier data related to 3Ms of manufacturing
  - 3Ms = Machine, Material, and Method
- Simplify predictive model building and model life cycle management to keep pace with the operations
- Near real-time evaluation/scoring of predictive models and trigger corrective actions to the right people

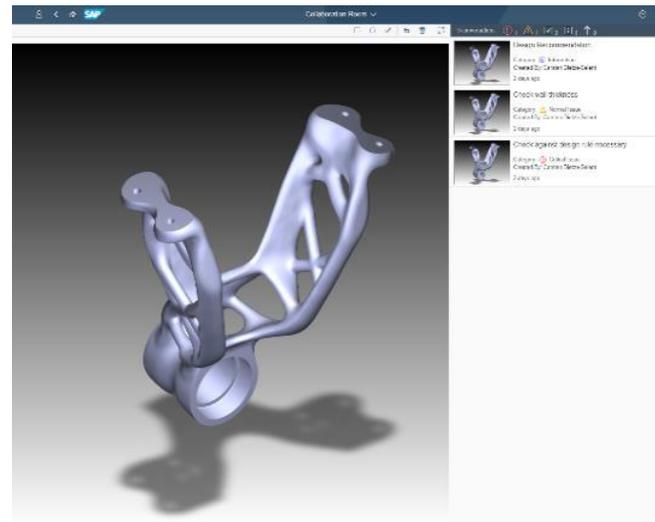

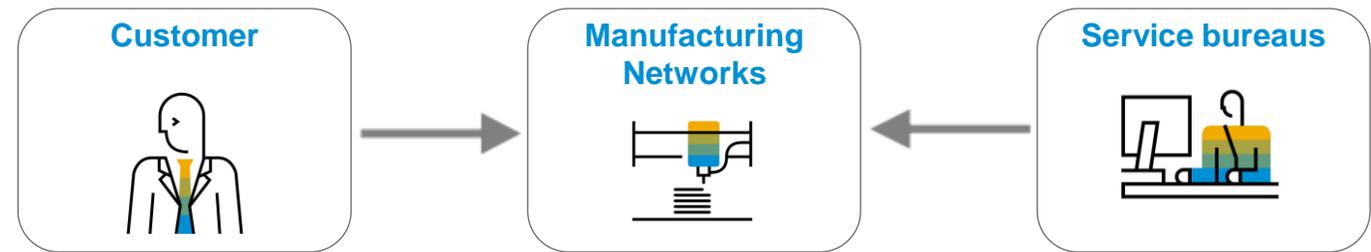

# Digital Manufacturing Cloud – Manufacturing Network

Provides a cloud-based collaborative platform that connects customers with (additive) manufacturing service providers, e.g. suppliers of 3D printing services, material providers, original equipment manufacturers (OEM), and technical certification companies

- **Collaboration** between customers and service providers on design optimization, quality and pricing
- Technical and economical **part assessment** by customers
- **Integration with SAP S/4HANA** for sourcing and procurement
- **Service offering advertisement** by service providers
- **Extensibility** to enable scenarios specific to domains, customers or service providers

# Streamlined Material Requirements Planning with SAP S/4HANA

More frequent MRP runs & improved, streamlined UI for fast resolution

## MRP Analysis for External & Internal Requirements

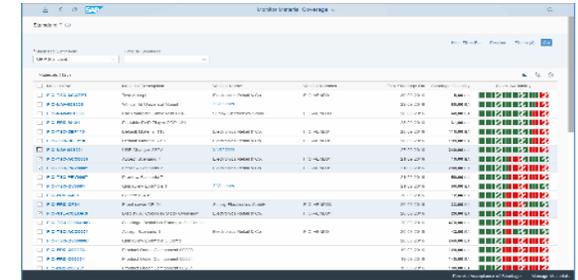

Detect **disruptions** in material availability & flow

**Exception & KPI**

driven process

Shorter **time-to-action**

Customize own **worklists**

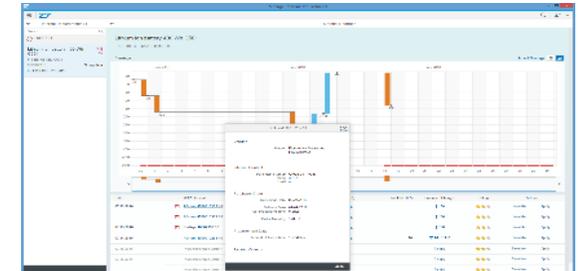

## Manage Internal or External Requirements

Find **issues**

**Simulate** their impact in real-time

Use **Change Requests** to track resolution flow

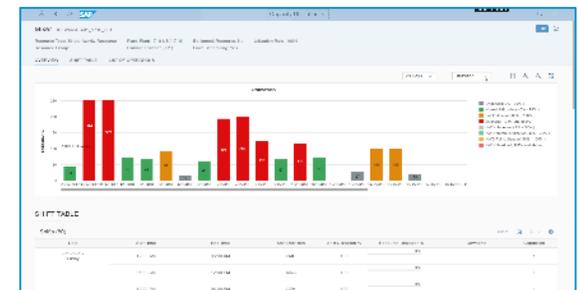

## Monitor Capacity

or

## Constraint based planning (PPDS)\*

**Analyze resource** impact of schedules

Provide **solution alternatives**

Use PPDS **Planning Board** for Reschedules & Pegging Optimization and Create **Collective Orders** for Suppliers\*

# Manufacturing Planning and Operations with SAP S/4HANA

## PRODUCTION PLANNING

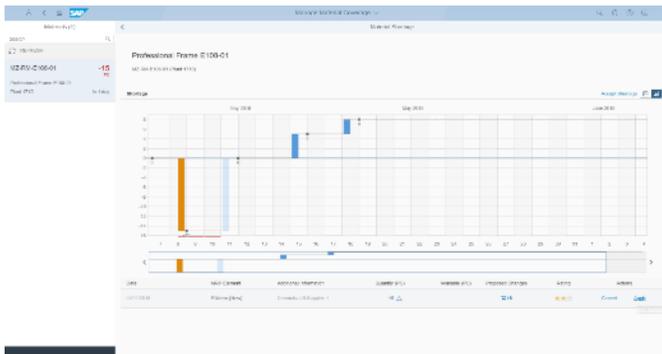

### Manage Material Shortages

MRP Live results in much faster creation of Supply

Use MRP Cockpits to identify any short term Material issues as bottleneck materials, and simulate their impact in real-time

Provide Insight to Action & resolution alternatives  
Use Change Requests to track resolution flow

New App: Display MRP Master Data Issues (F1425A Successor of F1425) to display issues of master data occurring during an MRP Live run to track status of acceptance and with links to related apps

### Monitor Capacity

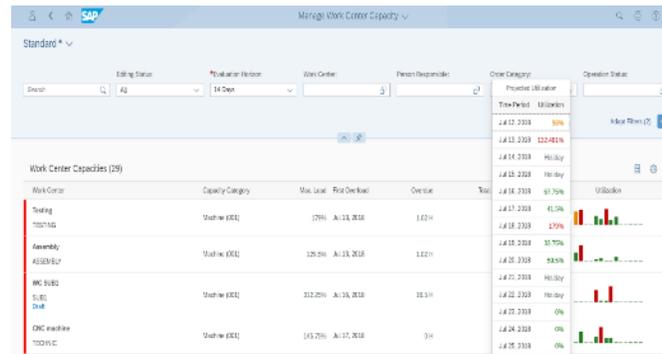

View the capacity requirement and available capacity for work centers and evaluate critical and overload situations based on priority, using KPIs

View the backlog of overdue orders and operations for work centers and capacity required to fulfill all the open orders in evaluation horizon

Visualize work center capacity utilization based on set bucket types, such as shifts, days or weeks to understand load distribution

See operations relevant to a work center, with operation specific capacity information and navigate to apps that let you manage orders and operations.

Manage shifts for a work center to enable a better utilization spread across an evaluation horizon

## PRODUCTION OPERATIONS

### Monitor Production Orders / Operations and Confirm Progress

Monitors production process either on order or on operation level

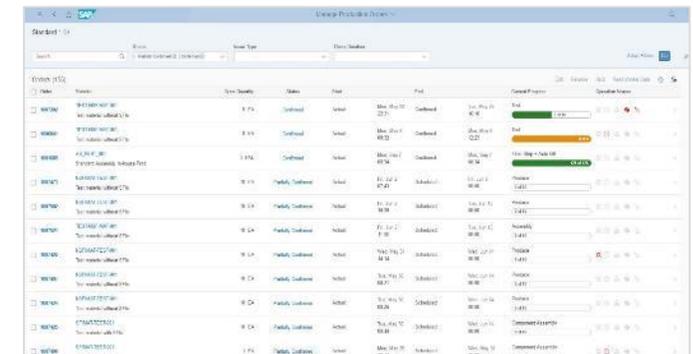

Automatically detects exceptions / issues, like Holds, Delays, Missing Components, Quantity Deviations & Quality Issues

Provides contextual information for root cause analysis and decision support

- Order Schedule and History
- Work Center Schedule and History
- Material availability in plant and supply area

Provides immediate actions

- Setting / Releasing Holds
- Manual order adjustments
- Order update with latest master data

# SAP S/4HANA Manufacturing

## S/4HANA LoB Solution in Manufacturing\*

### EXTENDED PRODUCTION PLANNING & SCHEDULING\*

PPDS

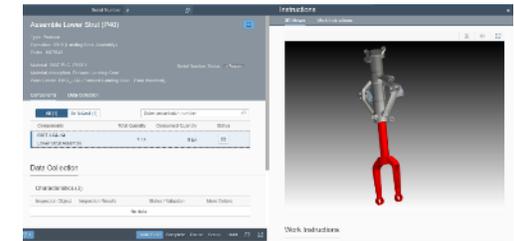

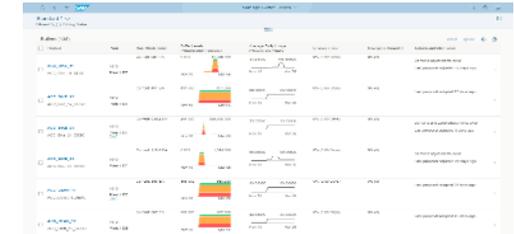

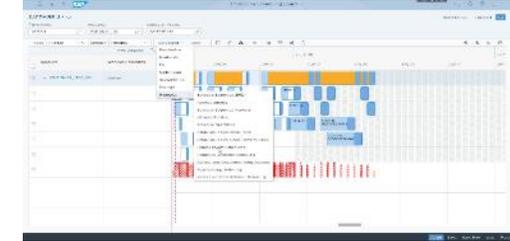

DDMRP

**Constraint Based Production Planning (PP/DS)** gets co-deployed with SAP S/4HANA on the same system utilizing one HANA database production or external procurement to cover product requirements. You can execute a **visualized Production Scheduling** to plan critical products, such as products with long replenishment lead times or products that are produced with bottleneck resources. In addition you can use the app “**Create Optimal Orders for Shipment**” app to order several materials in one purchase order and optimize the order quantities to best utilize the capacity of the means of transport.

**Demand Driven MRP** is targeting a **dynamic demand driven Replenishment and Inventory Optimization**. Goal is to manage buffers of components and semi-finished products across the complete BoM dynamically – to lower overall stock levels and still ensure high customer service levels at lowest possible inventory levels across the complete BoM / value chain.

### COMPLEX MANUFACTURING\*

**SAP S/4HANA Complex Manufacturing** is a solution to manage **Production Engineering & Operations** will extend the S/4HANA digital core to bridge the gap between engineering and manufacturing via facilitating digital collaboration of manufacturing master data, design structures handovers, process planning and intelligent change management.

## Additional Suite Solutions in Manufacturing \*\*

For flexible and detailed Shop Floor Control S/4HANA should be integrated with:

- **Responsive Manufacturing** (e.g. ME, MII, QIM, VE for Discrete Industries)
- **Production Operations** (e.g. MII, QIM for Process Industries)
- **Digital Operations for Manufacturing** (e.g. MII)
- **SAP Global Track & Trace**

\*Additional license - \*\*Additional installation and license – C(Partially) Compatibility scope

This presentation and SAP's strategy and possible future developments are subject to change and may be changed by SAP at any time for any reason without notice. # S/4HANA Constraint based Production Planning & Scheduling\*

## Finite capacity planning - PP/DS in S/4HANA:

Increased production throughput and reduced production costs leveraging finite capacity planning embedded in S/4HANA. **One MRP** plans everything: create finite production plan according to the available capacity situation and schedule available resources and generate production plan to the precision of seconds.

- Access SAP Fiori App for Production Scheduling Board as web based graphical scheduling tool
- Customize the web-based graphical scheduling tool for production planning and detailed scheduling according to various industry needs, major improvements in **Production Scheduling Board**
- **Combined order support** for planning/scheduling in to improve scheduling efficiency for order combinations to optimize manufacturing operations (former IS-Mill)

## Monitor Capacity Utilization:

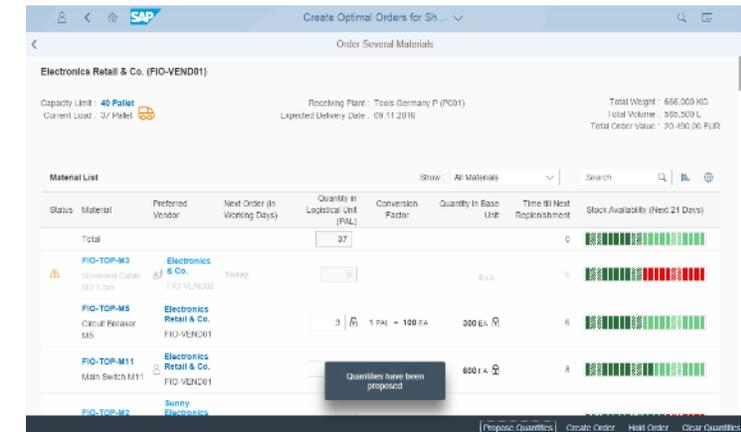

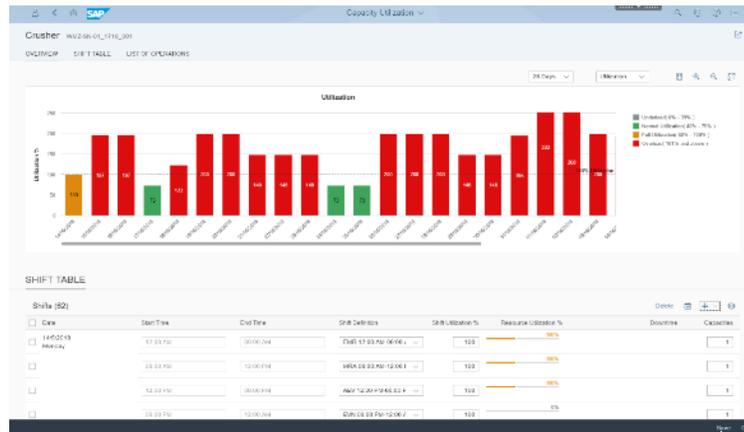

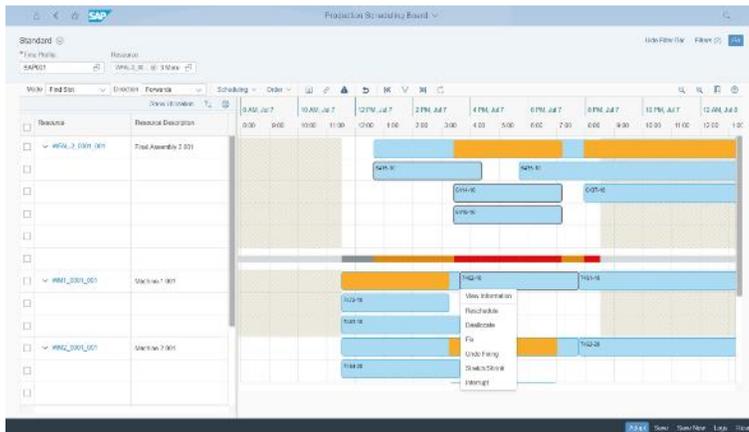

Capacity utilization of resources can be monitored using this app. Production Planners can add the area of responsibility to plants in which they want to monitor the capacity.

- Optimize and plan resource schedule and order dates and times in detail by taking the resource and component availability into account
- Plan critical products, such as products with long replenishment lead times or products that are produced with bottleneck resources
- Customizable evaluation profile and horizon available with Utilization Chart based on daily buckets.
- **Monitor Capacity Utilization** with new object page to analyze **capacity details by resource and manage shifts and operations.**

## Create Optimal Orders for Suppliers:

Optimize the results of your Material Requirements Planning (MRP) by creating collective purchase orders for material shortages.

- Use calculation logic of S/4HANA to optimize a **collective Purchase Order** for your schedule in seconds!
- Considers **supplier capacities** to harmonize own requirements against supplier constraints
- Use native HANA capabilities for **simulating** order combinations supported by **graphical visualizations.**

\*Additional license - \*\*Additional installation and license – C(Partially) Compatibility scope

This presentation and SAP's strategy and possible future developments are subject to change and may be changed by SAP at any time for any reason without notice. This document is provided without a warranty of any kind, either express or implied, including but not limited to, the implied warranties of merchantability, fitness for a particular purpose, or non-infringement

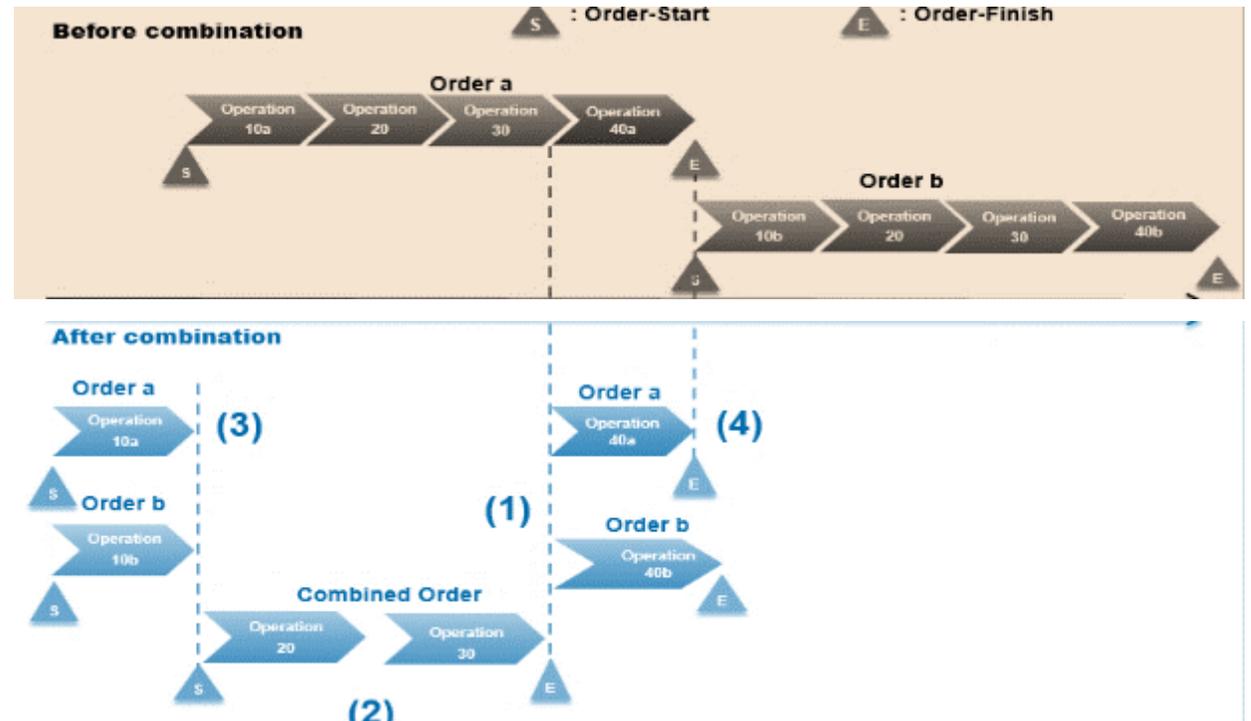

# Constrained-based combined orders scheduling

## Business Background

- **Different products** may go through **common process** steps. It is desirable to group and execute them together. This optimizes resource usage and reduces order handling for the user.

## Solution

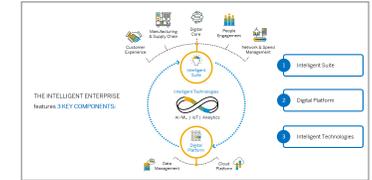

- Common operation sequences in different orders can be combined in one production order. Combination can be for selected operations (except process orders) or entire orders. Operations to be combined must have same base unit of measure and no gaps in between. The combination steps are selection, combination, and scheduling.
- With SAP S/4HANA 1709, constrained-based combined orders scheduling with PP/DS for SAP S/4HANA is activated by default. With activation on, for advanced planning materials, original orders combined via transaction MILL\_OC and the resultant combined orders are transferred to PP/DS for SAP S/4HANA. Combined orders integration with side-by-side SCM APO PP/DS remains not supported.

## Process View

- Search for earliest end date of the last operation to be combined, used as the finish date of the combined order
- Use Backwards scheduling of all objects to be combined
- Backwards scheduling of all operations of the original orders to be finished before combination
- Schedule all operations of the original orders to be executed after the combination

# Asset Intelligence Network Demo

# Why S/4HANA?

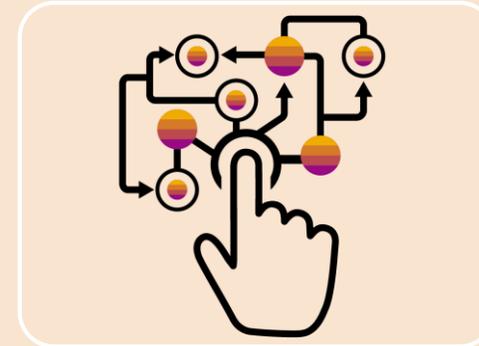

**Improve supply chain & production efficiency** with real-time insight from **granular manufacturing data** and ERP information, to take **immediate and corrective actions**

**Improve Material and Quality** through **real-time business network collaboration** with customers and suppliers

**Reduce speed loss** caused by quality and asset issues related to 3Ms (Machine, Material, and Method) through **predictive quality/asset management**

**Reduce Total Cost of Ownership** through natively integrated solutions from top floor down to shop floor and **without Extract - Transform - Load (ETL) process**

**Thank you.**
